NOTICE OF PUBLIC HEARING
Consideration of Mineral Resources Lands
of Statewide or Regional Significance
Bakersfield Production-Consumption Region
Kern County, California

NOTICE IS HEREBY GIVEN that the State Mining and Geology Board (SMGB) proposes to hold a public hearing in order to consider adoption of regulations to designate, and terminate, designated areas of statewide or regional significance and specify the boundaries thereof, for mineral resources lands located in the Bakersfield Production-Consumption Region, Kern County, in accordance with the Surface Mining and Reclamation Act of 1975 (SMARA), pursuant to Public Resources Code Division 2, Chapter 9, Article 6, Section 2790.

BACKGROUND

The State Mining and Geology Board (SMGB), based on recommendations from the State Geologist and public input, designates, or terminates the designation of, mineral deposits of regional or statewide significance within California. Designation is the formal recognition by the SMGB of lands containing mineral resources of regional or statewide economic significance that are needed to meet the demands of the future. At its October 8, 2009, regular business meeting, the SMGB accepted CGS Special Report 210 titled "*Update of Mineral Land Classification, Aggregate Materials in the Bakersfield P-C Region, Kern County, California*" (Busch, 2009). This report updated information on portland cement concrete (PCC) aggregate in the original classification study of the Bakersfield Production -Consumption Region published in 1988 by CGS as Special Report 147 titled "*Mineral Land Classification: Aggregate Materials in the Bakersfield Production-Consumption Region, Riverside County, California*" (Cole, 1988).

Special Report 147 identified 19,491 acres of land containing approximately 5.3 billion tons of PCC-grade aggregate resources. The reevaluation and update in Special Report 210 identifies 20,193 acres of land containing an estimated 4.4 billion tons of PCC-grade aggregate resources; this includes an additional 2,456 acres of newly

identified land containing an estimated 442 million tons of PCC-grade resources in areas adjacent to the Bakersfield P-C Region (Sectors I, J and K). The areas are identified as Candidate Sectors A through K (in 62 individual sectors and sub-sectors).

The publication of Special Report 147, and its update, Special Report 210, accomplishes part-one of the two-part *Classification-Designation process*. Part-two of the two-step process, designation, is the formal recognition by the SMGB of lands containing mineral resources of regional or statewide economic significance needed to meet the demands of the future. In the years since the original publication of Special Report 147, the designation process has not yet been completed.

The State Geologist has recommended several candidates, or areas, which meet or exceed the SMGB's threshold economic value, thus, each area may be considered for designation as an area of regional or statewide significance by the SMGB. These areas include candidate Sectors A through K (and their subsectors) as lands containing construction aggregate resources of regional or statewide significance.

On November 12, 2009, the SMGB accepted the recommendations set forth by the State Geologist for designation of mineral resources lands of regional or statewide economic significance in the Bakersfield Production-Consumption Region, Kern County, based on the information in Special Report 210.

The SMGB seeks recommendations of concerned federal, state, and local agencies, educational institutions, civic and public interest organizations, and private interest organizations, and private organizations and individuals, in the proposed actions.

CANDIDATE AREAS FOR DESIGNATION: The State Geologist has identified each sector, or group of sectors that meets or exceeds the SMGB's threshold economic value. Each Sector may be considered for designation as an area of regional or statewide significance by the SMGB pursuant to Article 6, Section 2790 *et seq.* (SMARA).
